A SCOTTISH WATER COMPANY

Save water and money through our water efficiency expertise

As a responsible water retailer, we play an important role inspiring and empowering our customers to only use the water they need. To facilitate this aim, we've pledged to help our customers save 20% of their water consumption by supporting and delivering water efficiency initiatives and raising awareness of the role we all can play in reducing our dependency on this essential natural resource.

Our team have extensive knowledge in identifying and delivering water efficiency measures, offering both virtual and on-site water audits to help you better understand how and where to save water.

**Using water wisely
saves energy and
money while also
reducing your impact
on our planet.**

Supporting you through water audits

Setting up a water efficiency plan doesn't have to be a major undertaking – even small savings here and there help make a big difference over time. We're here to help you understand where you can make savings through remote or site visit audits.

Remote audit

You'll be sent an audit kit ahead of the call so you can prepare a few things before the audit. One of our experienced engineers will then host a live video call to talk through the audit requirements and answer any questions. A virtual audit is a quick, low-cost first step to identify locations that will benefit from more extensive measures.

Site visit audit

One of our engineers will conduct the site visit (typically over one day though this is dependent on the size of your site) to assess all water fittings.

We also offer a **hybrid model of remote audit** followed by a focused site visit to tackle any inefficiencies identified.

Whichever audit you opt for, you'll be sent a report detailing where improvements can be made to reduce water consumption and increase water efficiency. The report details specific devices (such as toilets, urinals, taps, etc.) that can be replaced to achieve this, alongside indicative costs and potential annual savings.

You can also download our easy-to-use DIY water efficiency audit on [our website](#). You'll be able to follow this guide to do your own audit and create a plan that will help you save water across your business.

Helping you save water

We offer an industry-leading range of water-saving devices which we provide, install and maintain. By using these devices, backed with our water efficiency expertise, you will:

improve your carbon footprint. Getting water to your premises and beyond uses energy. Reducing water means less CO₂ is released, which in turn reduces your carbon footprint.

help to protect our ecosystem. Lowering overall water usage means more stays at the natural source, reducing strain on local ecosystems.

reduce pressure on your waste water network, as there's less water flow, and

lower your bills. Use less water and you'll pay less – it's as simple as that.

Start saving straight away

We offer, via our online shop, a wide range of discounted devices to help you reduce your water use and save money. You can install most of these devices yourself without specialist equipment or trade support.

As the UK's most experienced water retailer, we've helped thousands of customers like you save water and money. Since 2020, we've saved our customers:

Over
£11million
in water and energy efficiencies.

5.9billion
litres of water
the equivalent of **23,600**
Olympic-sized swimming pools.
